Support for 2022 Fascia Research Congress

Attn: Barbara Bellanova

Dear Congress Associates,

On behalf of researchers from CERAP laboratory, French practitioners from FasciaFrance, and students and teachers from TMG Concept, we are sending you our wholehearted support for the 6th Fascia Research Congress.

This new edition will be a meaningful step to a better recognition of the role of fascia for physical and mental health. With the 2022 theme focused on creating links between research and practice, this congress gives a unique opportunity to support the exchanges initiated by the first FRC, 2007.

By bringing together international experts for cutting edge conferences and workshops, in many fields, this congress will allow practitioners from all around the world to learn about the extent of the practical applications of the research (biomechanics, biology, neurosciences, etc.) and to update their clinical knowledge.

As for the previous congresses, our team will be present in Montreal to bring our contribution and share our enthusiasm for fascia.

We encourage every DBM Fasciatherapy practitioner and every practitioner in the field of manual therapy, movement, and complementary and alternative medicines to attempt this unique meeting.

We fully support the organizers of this congress, and we are certain that this edition will, again, be exceptional in quality.

Sincerely,

Christian Courraud

Director of CERAP/UFP
